screeds

**Screened & Heating:
The dynamic DUO**

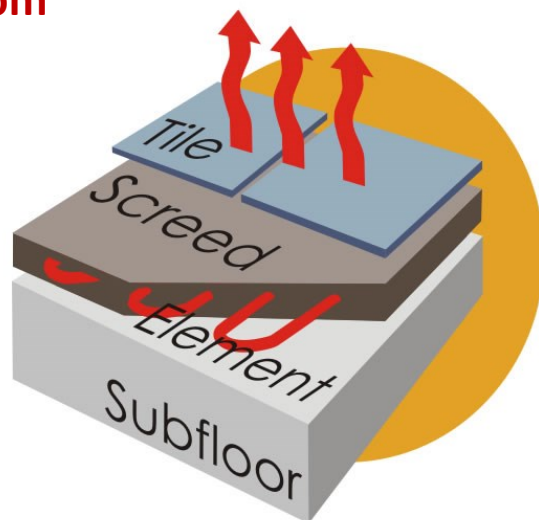

UP TO 50% MORE heating systems' EFFICIENCY with a RIGHT screed !!!

HOW COULD BE POSSIBLE ???

Not only load-bearing function for the screed, which dramatically affects on energy efficiency

Heat rises from the floor and fills the room in such a way proportional to the thermal conductivity of the screed in relation to a reduced thickness

Well-being in the room increases as well as heating time and costs decrease

Cement-based screeds lead up to 30% more than gypsum-based ones

ColibriScreeds[®] can even reach 50% because more compact

- ↑ **Greater stability**
- ↑ **Equal load capacity, the overall height can be reduced by up to 55%: from standard 45mm height up to 20mm depending on additive type**
- ↑ **Heat more quickly reaches the floor surface and, accordingly, the room**
- ↑ **Ideal solution also for renovation projects**
